Torso subset scaling: fixed physical box, model and 1,048,576 probability queries
Single runs; offline full-kernel audits excluded; no full-Torso or competing-method win claimed
Complete million-query workload
Passes both output gates
Fails variance gate
Setup + mean + variance + queries (s)
28.4 s
75.8 s
196.8 s
77.8k
196.6k
524.3k
Torso observations
Stronger AFN at 524k; eight variance steps
Mean PCG iterations
23
